# Dataset overview

Time-series data from a Facebook **app-install** campaign promoting a single **iOS app** in **Brazil**, running **October 7, 2025 to December 31, 2025**. The app was **free**; monetization came from **in-app purchases** and **in-app ads**. The campaign used **one creative**, **broad audience**, and **iOS Facebook app placements only**. A daily **budget cap of $90** was set throughout.

# File structure

Google Sheet with **2 tabs**:

## 1) “Ad Data”

Daily campaign performance and unit economics. Columns:

- **Ad spend (USD)** — Amount spent that day (daily budget capped at $90).
- **CPM (USD)** — *Cost per 1,000 impressions.*
- **CTR (%)** — *Click-through rate:* share of impressions that generated a click/tap.
- **Paid downloads (count)** — Installs attributed to the ad.
- **CPI (USD)** — *Cost per install:* Ad spend ÷ Paid downloads.
- **ARPD on paid downloads (USD)** — *Average revenue per ad-attributed install*.
- **APPD on paid downloads (USD)** — *Average profit per ad-attributed install*.
